

**In the Specification:**

Please amend the specification by inserting the following text at page 8, between lines 21 and 22:

**-- BRIEF DESCRIPTION OF THE DRAWINGS**

Figures 1A and 1B illustrate embodiments of the invention having a hydroisomerisation section comprising at least one reactor, and a separation section comprising by at least one unit;

Figures 2.1A, 2.1B, 2.2A, 2.2B, and 2.2C illustrate embodiments of the invention wherein the hydroisomerisation reaction is carried out in at least two distinct sections, each comprising at least one reactor, and in which the feed is fractionated into three fluxes in at least one separation section, comprising at least one unit;

Figure 3 illustrates a zeolite with structure type EUO having principal channels with 10 MR openings that are provided with side pockets channels of at least 12 MR; and

Figure 4 illustrates a zeolite with structure type NES having an interconnected two-dimensional network wherein 10 MR channels are connected together by porous 12 MR segments, perpendicular to the 10 MR channels.--
